A study of low level vibrations as a power source for wireless sensor nodes, Paul K. Wright, Jan Rabaey University of California, Berkeley, 2111 Etcheverry Hall, Berkeley, CA 94720, USA Received 9 October 2002; accepted 9 October 2002
Abstract Advances in low power VLSI design, along with the potentially low duty cycle of wireless sensor nodes open up the possibility of powering small wireless computing devices from scavenged ambient power.

Sentence Similar Rate : 100%

Abroad review of potential powerscavenging technologies and conventional energy sources is first presented.

Sentence Similar Rate : 100%

Low-level vibrations occurring in common household and office environments as a potential power source are studied in depth.

Sentence Similar Rate : 100%

The goal of this paper is not to suggest that the conversion of vibrations is the better, but to study its potential.

Sentence Similar Rate : 100%

Different conversion mechanisms are investigated and evaluated leading to specific optimized designs for both capacitive MicroElectroMechanical Systems (MEMS) and piezoelectric converters.

A Study of Blog Search.pdf
of Amsterdam, Kruislaan 403, 1098 SJ Amsterdam, The Netherlands gilad.mdr@science.uva.nl Abstract.

Sentence Similar Rate : 0%

We present an analysis of a large blog search engine query log, exploring a number of angles such as query intent, query topics, and user sessions.

Sentence Similar Rate : 38%

Our results show that blog searches have different intents than general web searches, suggesting that the primary targets of blog searchers are tracking references to named entities, and locating blogs by theme.

Sentence Similar Rate : 0%

In terms of interest areas, blog searchers are, on average, more engaged in technology, entertainment, and politics than web searchers, with a particular interest in current events.

The user has an interest in...

We interpret this as suggesting that the primary targets of blog searchers are tracking references to entities, and, to a lesser extent, identifying blogs or posts which focus on a certain concept.

What is the behavior profile of the blog searcher, in terms of popular queries, number of result pages viewed per query, frequency of searches, and so on? Our analysis follows the large body of work in the area of search engine log analysis: a recent survey paper refers to numerous studies in this area published during the last 10 years [77].

In particular, we are guided by Broder's work on classifying search requests of web users using the (then popular) AltaVista search engine [40], as well as the follow-up work by Rose and Levinson with Yahoo! data [256].

[278], as well as the numerous analyses published by Jansen, Spink et al., which targeted various angles of search engine usage (e.g., [130, 129, 40]). We proceed as follows.

... content feeds that has been ...
